

STOPAQ® WRAPPINGBAND CZH-DS

Product Information

Product description: Stopaq® Wrappingband CZH-DS is a double-sided corrosion preventative wrap material adhering extremely well to steel and plant applied pipeline coatings like PE, PP and FBE.

Stopaq® Wrappingband CZH-DS is a non-toxic, cold-applied, prefabricated wrap coating, based on a compound consisting of non-crystalline, low-viscosity, non-crosslinked (fully amorphous), pure homopolymer Polyisobutene.

Stopaq® Wrappingband CZH-DS is viscous at the indicated operating temperatures. Due to its liquid nature it has a set of unique properties like cold-flow into all irregularities of the substrate, and self-healing of the complete coating system. The compound does not cure and is unable to build up internal stress. Stopaq® Wrappingband CZH-DS is fully resistant to water and has a low gas- and water vapour permeability.

Stopaq® Wrappingband CZH-DS requires application of a polymeric outerwrap like Stopaq® Outerwrap (various types available) or Stopaq® High Impact Shield. This improves impact and indentation resistance of the coating system and supports the self-healing ability of small damages like dents and cuts. Optionally additional mechanical protective layers can be applied on top like Stopaq® Polyester or Stopaq® Outerglass Shield XT Grey.

Features:

- Controlled cold flow providing permanent inflow into the finest pores of the substrate
 - Resistant to low temperatures without getting brittle
 - Conforms to irregular shapes
 - Low surface tension; adheres on many types of dry substrates at a molecular level
 - Surface tolerant: no abrasive blasting techniques required, wire brushing is sufficient (ISO 8501-1: St 2)
 - Constant film thickness
 - Adhesion based on vanderWaals forces
 - Self-healing of small dents, voids and cracks
 - Inert to ageing and weathering
 - Resistant to many chemicals like water, salts, acids, alkalis, polar solvents, etc.
- For additional information, please consult Seal For Life Industries.

Benefits:

- Safe to use. No physical, health or environmental hazards.
- Fast and easy field application
- Can be moulded onto various types of irregular shaped objects
- No osmosis or underfilm migration of moisture
- No cathodic disbondment
- Cathodic Protection (CP) of steel structures is not affected

Application examples

Piping and vessels: For protection against external corrosion of buried, immersed or above ground carbon steel, alloyed steel and ductile iron pipelines structures and reservoirs.

Field joints: For protection against external corrosion of buried, immersed or above ground carbon steel, alloyed steel and ductile iron pipeline girth-weld joints.

Fittings: For protection against external corrosion of buried, immersed or above ground carbon steel, alloyed steel and ductile iron pipe fittings such as elbows, bends, tees, reducers, flanges, etc.

Pipe coating repair and rehabilitation: For repair and rehabilitation and protection against external corrosion of pipeline coating defects.

Seams and joints: For sealing of seams and joints in steel structures.

Product properties of Stopaq® Wrappingband CZH-DS

| | |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Colour | Green |
| Thickness | 2,0 ± 0,2 mm [80 ± 8 mils] ^{A)} |
| Density | 1,5 ± 0,1 g/cm ³ [12,5 ± 0.8 lbs/gal] (ISO 1183-1) |
| Temperature ranges | Operational: -45 °C to +70 °C [-49 °F to +158 °F] Short term: +90 °C [+194 °F] |
| Glass transition temp. | ≤ - 65 °C [-85 °F] ^{A), B)} |
| Crystallization temp. | Tested range -100 °C to +190 °C [-148 °F to +374 °F] ^{A)} : – No evidence of crystallization or melting point. |
| Drip resistance | Tested 48h @ +130 °C [+266 °F] ^{A)} : – No dripping of compound |
| Specific electrical insulation resistance | RS ₁₀₀ ≥ 10 ⁸ (1E+08) Ω.m ² [≥ 10 ⁹ (1E+09) Ω.ft ²] ^{A)} |
| Adhesion | Peel tests on carbon steel (Sa 2½, St 3, and St 2) and plant coatings PP, PE, and FBE ^{A)} : – @ +23 °C [+73 °F] ≥ 0,2 N/mm [≥ 18 ozf/in] – @ +70 °C [+158 °F] ≥ 0,02 N/mm [≥ 1.8 oz/in] In all cases cohesive separation mode and ≥ 95% coverage of surface |

^{A)} According to ISO 21809-3:2016 coating type 13

General order information

| | |
|------------------|---------------------------------------------------------------------------------------------------------------------|
| Product | Stopaq® Wrappingband CZH-DS is available in rolls of various widths and lengths |
| Art. Nr.: | Product dimensions and contents: |
| 6701 | 50mm x 10m [2"x33']; 12 pcs/box; 360 pcs/pallet |
| 6704 | 200mm x 20m [8"x66']; 2 pcs/box; 96 pcs/pallet |
| | Other sizes on request. |
| Handling | Handle with care. Keep boxes upright. |
| Storage | Store indoor, clean and dry, away from direct sunlight in a cool place below +45 °C [113 °F]. Unlimited shelf life. |

| Application instruction - Job preparation | | Application instruction – Brief version | |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tools, equipment and auxiliaries | <ul style="list-style-type: none"> – Temperature probe, Dew point tester, High voltage holiday tester – Scissors, Knife, Measuring tape – Abrasive cleaning pads, Wire brushes – SFL Cleaning Wipes, SFL Substrate Cleaner, or Isopropyl alcohol, cas. nr. 67-63-0 – Personal protective gear | Detailed application instructions are available from Seal For Life Industries. | |
| Additional coating materials | <p>Depending on type of application Stopaq® Wrappingband CZH-DS application of a polymeric outer wrap is required, such as:</p> <ul style="list-style-type: none"> – Stopaq® Outerwrap PE/PVC/HSPE/HSPEX/HTPP – Stopaq® High Impact Shield <p>Optionally, additional mechanical protective layers can be applied over the complete coating, like:</p> <ul style="list-style-type: none"> – Stopaq® Outerglass Shield XT Grey – Stopaq® Polyester | Wrapping | Start with removal of a small part of the inner release foil and apply the Stopaq® Wrappingband CZH-DS on the substrate. Apply Wrappingband without any tension onto the substrate. Avoid air-enclosures. Mould the Wrappingband tight onto the substrate. |
| High humidity | Stopaq® Wrappingband CZH-DS can be applied in a humid atmosphere. The substrate must be free from condensing water which can be reached by keeping the temperature at least 3 °C [6 °F] above dew point. | Release foil | Do not entirely remove the inner release foil before application of the Stopaq® Wrappingband CZH-DS. Remove just prior to application of the Wrappingband to the surface. When applicable, remove the outer release foil prior to overlapping of Wrappingband onto itself. |
| Work area and substrate | The substrate must be dry, clean and protected against negative weather influences. | Overlap of wraps | Side-by-side overlap: ≥ 10 mm [3/8"] Consecutive rolls: ≥ 50 mm [2"] Overlap on existing coatings: See specific coating instructions. |
| Product conditions | Stopaq® Wrappingband CZH-DS must be dry and the temperature should preferably be between +20 °C and +40 °C [68 to 104 °F] for the ease of application. | Visual inspection | The appearance of Stopaq® Wrappingband CZH-DS should look smooth and tight, and should be shaped around all details and into corners. |
| | | Holiday detection | The coated surface must be checked for holidays using a high voltage holiday detector at 15 kV equipped with a brush probe prior to application of any outer wrap material. |
| | | Application of outer wrap materials | Stopaq® Wrappingband CZH-DS must be protected against impacts, indentations, soil pressure and other influences by application of Stopaq® Outerwrap or Stopaq® High Impact Shield. Optionally, additional mechanical protective materials like Stopaq® Outerglass Shield XT Grey or Stopaq® Polyester can be installed over the complete coating system. Please consult Seal For Life Industries for further information. |
| Application instruction - Surface preparation | | Handling and commissioning | |
| General | The area to be coated must be clean, dry, and free from oil, grease and dust. All contamination including mill-scale must be removed. | Exposure to loads | Objects coated with Stopaq® Wrappingband CZH-DS should not be exposed to loads e.g. from supports- or lifting equipment. |
| Degreasing | Degrease surfaces with SFL Cleaning Wipes, SFL Substrate Cleaner, or Isopropyl alcohol and e.g. a lint-free cloth. | Immersion or burying | Immersion or burying is possible immediately after completion of the coating application. Consult data sheets for specific instructions of additional materials used. Backfill and compact with clean sand and filling material without sharp stones or hard lumps of soil. |
| Preventing condensation of water | Prior to and during the application, the temperature of the substrate(s) must be at least 3 °C [6 °F] above the dew point. | | |
| Substrate temperature | Temperature of the substrate should preferably be between +20 °C and +40 °C [68 to 104 °F] for fast and easy application. Preheating may be required. | | |
| Carbon Steel | Minimum requirement for surface preparation is St 2 according to ISO 8501-1. Roughness profile is not essential for adhesion. | | |
| Existing coating - Bitumen | Specific instructions apply for bitumen. Remove loose coating and make sure that the surface is clean and dry. The product must not be applied on moist bitumen. Moderate heating of bitumen is recommended in order to let trapped water evaporate. After this, bitumen should be allowed to cool down to preferred substrate temperature. | | |
| Existing coatings - others | De-gloss and degrease the surfaces with SFL™ Cleaning Wipes, or with SFL™ Substrate cleaner and an abrasive pad. | | |
| Cleanliness check | Take a piece of Wrappingband of ± 150 mm [6"] length, remove the release foil and fold it back for about 25 mm [1"]. Put the Wrappingband onto the surface, press it firmly and leave it for 5 minutes. Pull the Wrappingband from the substrate with an angle of app. 135 deg. and a speed of 100 mm/min [4"/min]. Cohesive separation mode should occur and coverage of the surface with remaining material should be ≥ 95%. If this is less, surface cleaning is insufficient. At too low substrate temperatures this test may not be successful. Preheat the substrate to preferred temperature and repeat the test. | | |
