

STOPAQ® GEOTEXTILE

Product Information

Product description: Stopaq® Geotextile is a strong woven geotextile fabric made of polyolefin. It is used as additional mechanical protection for underground coated objects for protection against mechanical impacts and indentations, and prevents ingrowth of roots. Due to its high water permeability it will not influence cathodic protection of buried steel objects.

Features:

- High water permeability
- Additional mechanical protection of coated objects
- UV-resistant
- Rot-free

Benefits:

- Harmless to environment and workers
- Fast and easy to apply
- Cathodic protection is not negatively influenced

Application examples

Coated pipes and fittings: Additional mechanical protection of underground coated pipes and fittings.

Product properties of Stopaq® Geotextile

Colour	Black, with length-wise and transversal white markings every 25 cm
Weight	100 g/m ²
Melting point	165°C
Water permeability	10 l/m ² .s (ISO 11058)

General order information

Product	Stopaq® Geotextile is available in rolls or in pre-cut lengths:
Art. Nr.: 1070	<u>Product dimensions and contents:</u> – Roll 1m x 100m each (W x L) ~ or ~ – Per m ² , to be specified by client.
Handling	Handle with care.
Storage	Store indoor, clean and dry. Unlimited shelf life.
